

CONNECTIVITY ASSESSMENT

Where Connectivity Breaks Down

- Rising costs from outdated or misaligned network contracts
- Limited bandwidth or scalability to support growing business demands
- Frequent outages or inconsistent performance impacting operations
- Lack of redundancy creating single points of failure
- Managing multiple carriers across locations with no centralized visibility
- Difficulty supporting cloud, voice, and application performance needs
- Poor insight into network usage, capacity, and optimization opportunities

Build a Network That Actually Supports the Business

Connectivity is the backbone of everything your business relies on. But too often, it's treated as a set-it-and-forget-it expense until something breaks or slows you down.

Most environments are a mix of legacy contracts, mismatched circuit types, and limited visibility. That leads to wasted spend, performance issues, and risk that no one sees coming.

Catalyst Group helps you simplify the complexity. Whether you're stabilizing performance, reducing costs, or preparing for growth, we provide vendor-neutral guidance, so your network is reliable, scalable, and aligned to how your business actually operates.

How We Fix It

- **Network Audit:** Carriers, circuits, contracts, and spend
- **Performance Check:** Bandwidth, latency, and reliability gaps
- **Connectivity Strategy:** Right-fit solutions for each location
- **Redundancy Design:** Eliminate single points of failure
- **Cost Optimization:** Reduce waste and improve contracts
- **Optimization Plan:** Clear path to improve and scale
- **Implementation Support:** Sourcing through turn-up
- **Ongoing Support:** Monitor, manage, and optimize over time
